# Qlik Certification Program

About This Catalog

This catalog is an overview of the Qlik Certification Program. It is an extension of Qlik's standard course catalog and its purpose is to provide information about the certification exams and the recommended preparation resources, including education offerings.

Why Qlik Education Services?
Qlik Education Services offers expertly designed coursework, tools, and programs to give your organization the knowledge and skills needed to develop, deploy and adopt our powerful Qlik applications. By partnering with Qlik Education Services, organizations can rapidly develop and deploy meaningful applications and put the power of business discovery in the hands of their business users — enabling them to make smarter, more informed decisions.

Engaging Qlik Education Services enables your users to:

- Accelerate time-to-value
- Build their knowledge of key capabilities and functionality within the Qlik platform
- Learn to build powerful, meaningful applications from highly skilled and experienced instructors
- Increase your return on investment

Training Options

When it comes to learning, one size does not fit all. Therefore, Qlik offers a wide variety of delivery methods to suit different learning preferences, organizational logistics, and the needs of specific Qlik user roles.

Instructor-led

Classroom training:
Qlik Education Services provides you with a learning experience that promotes interactive in-class instruction as well as technically and functionally relevant labs and exercises. This delivery method is a traditional, in-person classroom computer training approach, delivered onsite at your facility or regionally at select Qlik training locations. An instructor leads a group of students through demonstrations and hands-on exercises.

Online training:
This delivery method is a live instructor-led course, held in virtual classrooms online. Students access the courses via web conferencing technologies and are provided access to software via a cloud-based solution. An instructor leads a group of students through demonstrations and hands-on exercises.

On-site training:
On-site training, similar to classroom training, is a perfect option when you have a number of employees who need the same training and can train together at your location, with optional virtual participation for added flexibility. On-site training events maximize the learning experience and suit the specific needs of your project teams, IT departments, and/or other business user groups.

OnDemand

For training at your own pace, you may choose from a wide selection of individual eLearning courses which cover key Qlik subjects and topics. This delivery method includes self-directed videos or documentation that provides baseline knowledge and how-to instructions.

About Certification

With Qlik certification, you can benchmark your skills against an established and objective level of competency, and confirm your level of expertise. The program also helps to ensure consistency and quality of services and support provided by partners and consultants. To achieve certification, you must pass an exam based on skills and knowledge related to a certain role and its tasks. All exams cost $250 USD.

To prepare for your exam, gain the pre-requisite knowledge and experience, review the recommended preparation resources and use the exam domain areas listed on the certification web pages as a study guide.

Available Certifications

QlikView 11 Designer

The QlikView 11 Designer Certification Exam tests QlikView knowledge focused on the user interface design of QlikView applications. The certification is suggested for all roles involved in the approach, design and layout of the QlikView application user interface.

QlikView 11 Developer

The QlikView 11 Developer Certification Exam tests the technical skills necessary to develop (design and script) and deploy QlikView applications. The exam focuses on the technical aspects of developing a QlikView application and is suggested for those in technical roles such as sales engineering, support and implementation.

Passing the QlikView 11 Developer Certification Exam grants you BOTH the QlikView 11 Developer and QlikView 11 Designer certifications.

QlikView 11 System Administrator

The QlikView System Administrator Certification Exam confirms you have the appropriate technical infrastructure knowledge, skills and experience to support QlikView deployments. It also verifies you understand the best approaches to set up and run QlikView Server and Publisher installations in complex IT environments. The certification is suggested for IT system administration professionals.

Qlik Sense System Administrator

The Qlik Sense System Administrator Certification Exam tests your knowledge of managing a Qlik Sense environment. This exam tests your ability to set up the environment, configure access, configure apps, tasks and the content library, manage the environment, and troubleshoot problems and errors.

Qlik Sense Data Architect

The Qlik Sense Data Architect Certification Exam tests your knowledge of developing and managing data models used to create Qlik Sense visualizations. This exam tests your ability to translate business requirements into technical requirements, to design, create and validate the data model, and build the master library.

QlikView 11 Designer Certification

Description

The QlikView 11 Designer Certification Exam tests your ability to gather and interpret requirements, identify and analyze data sources, and design and develop the application user interface.
